Micropower E.D AB

Micropower AB develops battery chargers and power supply units.

Environment and Quality

MTM-HF is developed and manufactured in accordance with Micropowers environmental and quality system. (ISO 14001 and ISO9001).

Our environmental policy can be summarized as:

Micropower shall strive to protect the environment by:

- as much as possible using recyclable resources in the products and in the daily work.
- fulfilling and exceeding applicable laws and demands from customers and authorities.
- constantly working with improvements and a preventive environmental work.

The environmental goals are defined from the policy.

Micropower shall openly communicate our environmental work.

MTM-HF

MTM-HF is a high frequency charger in an IP20 encapsulation.

The product is developed for usage in an industrial environment.

MTM-HF consists of

Metal casing	4kg
Printed circuit board	0,24m ²
Electronics	8kg
Cables	0,5kg Cu

Usage

The charger has an impact on the environment through its life cycle.

The energy consumption during usage of the charger has the biggest environmental impact.

Recycling

The charger is to be handled as electronic and metal waste.
